Why is it sensible to develop an app?

Because a lot of people are using a smartphone. Therefore an app could be used for a wide range of applications.

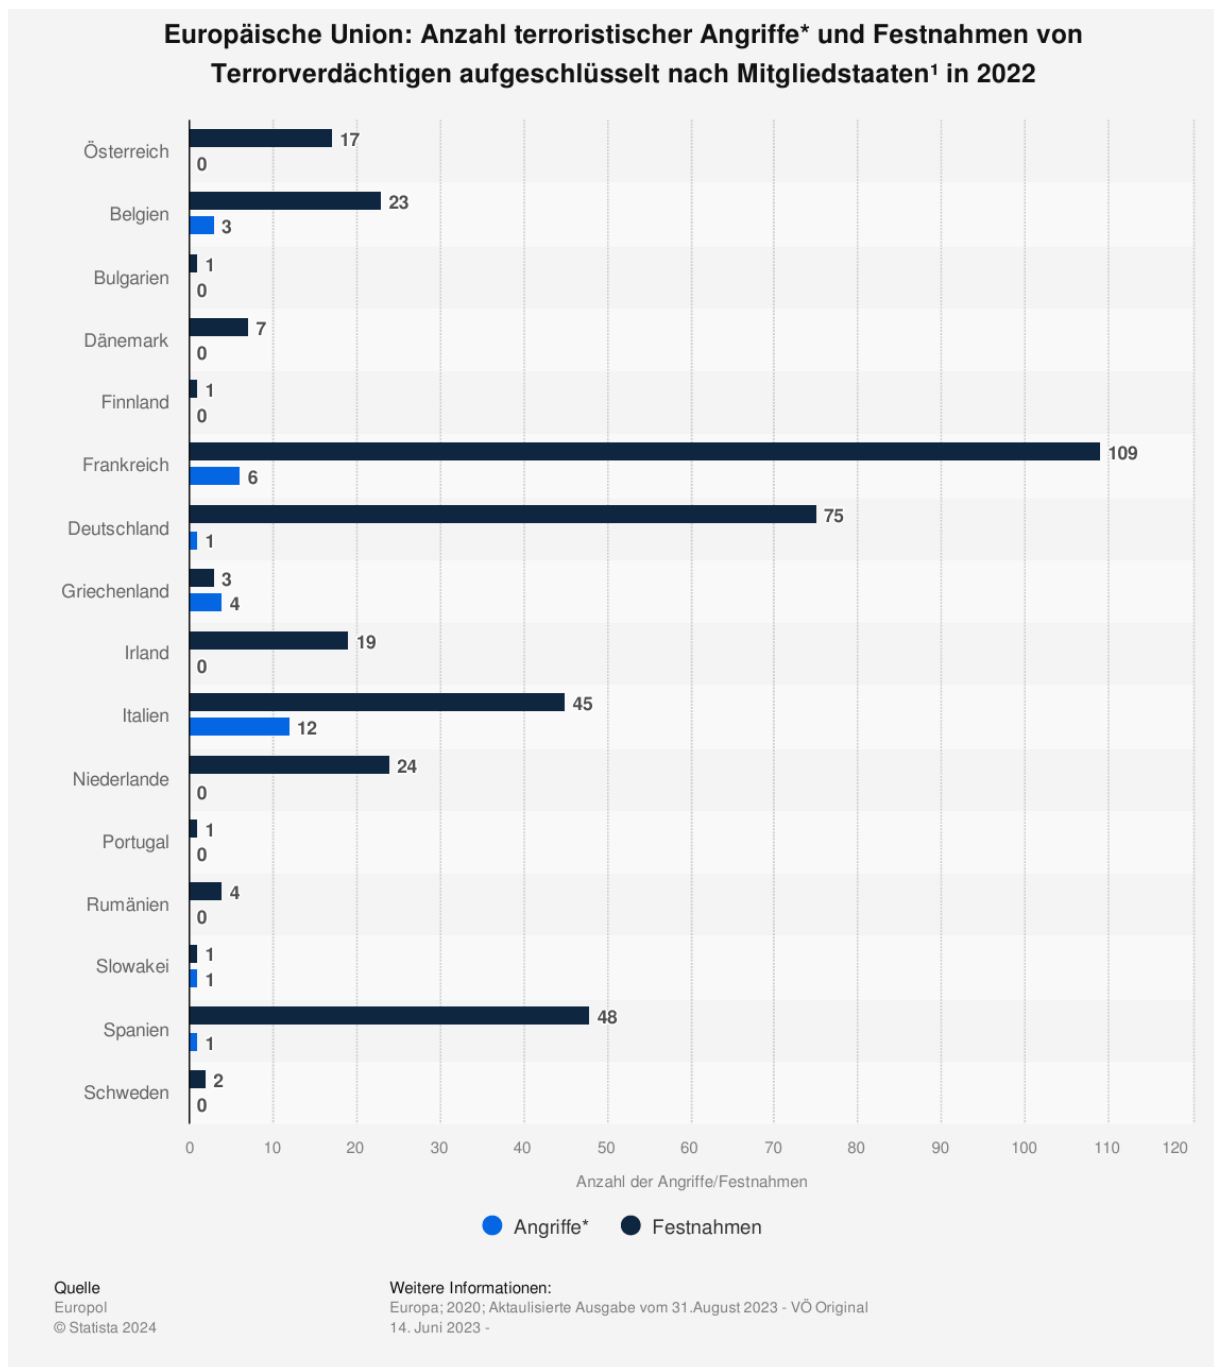

Here for example is the smartphone use in Germany over the years :

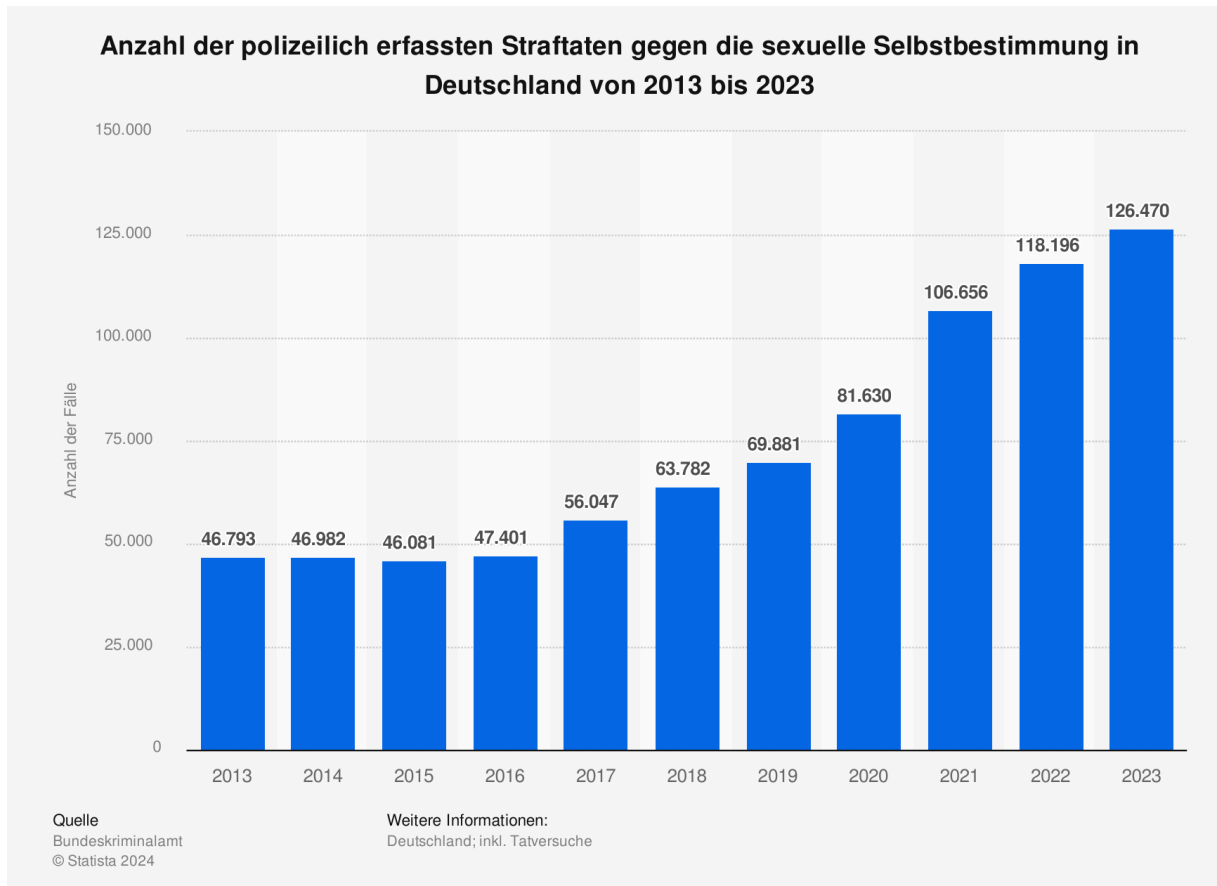

„Such an app is so unnessecary. That many incidents are not even happening“

Just a few examples so you can see it is not unnessecary:

- 1) „Number of terrorist attacks* and arrests of suspected terrorists by member state oft he EU in 2022“

2) „Number of offences against sexual self-determination recorded by the police in Germany from 2013 to 2023“

3) „Number of firefighting operations for fires and explosions in Germany from 2000 to 2021“
